Tuna men win eco awards

VITO Gulli of Generale Conserve and Hagen Stehr of Clean Seas have become the first recipients of Friend of the Sea's sustainable seafood award for their efforts in responsible tuna production, writes Jason Holland.

Gulli is CEO of Italy-based Generale Conserve, which produces the Acqua Mar premium range of pelagic products – tuna, mackerel and sardines – all of which are sourced from Friend of the Sea-certified fisheries.

According to Friend of the Sea director Paolo Bray, Gulli understands the ethical and economic added-value of sustainability and has made it the company's flag: importing, processing and distributing only sustainable products certified by the NGO.

Generale Conserve's tuna comes from company Collaco in the Azores. Fishermen from these Portuguese islands, half-way between Europe and the US, use the pole and line method to catch tuna.

'We are proud to have been the first company to trust in this concept,' says Gulli. 'And the tuna products have inspired many other sustainable projects.'

Stehr, CEO of Australia-based Clean Seas, has seen his company become the first in the world to naturally close the lifecycle of southern bluefin tuna (Thunnus maccoyii) held in captivity on March 2 this year (see April 2008 issue).

'We will run the breeding cycle another two or three times this year and then we will take the next step,' reveals Stehr. 'The propagation of southern bluefin is a fact of life and it will happen sooner rather than later.'

'We created a completely new industry when we closed the lifecycle of kingfish a few years ago, and we are going to do it again with southern bluefin.'

According to Bray, Stehr's achievement shows the potential of the fishing industry for improvement towards sustainability and should motivate others in the seafood business to follow.

'It gives hope to the future of this industry,' he says. 'Hagen Stehr has pushed his company to achieving the highest environmental standards. We have a monumental move. Clean Seas was expecting to announce it had become carbon neutral by the end of last month.'

Friend of the Sea introduced its new award at the recent Tuna 2008 conference in Bangkok, Thailand. The accolade is aimed at encouraging and motivating seafood companies to lower their impact on the environment and on exploited stocks. As Seafood International went to press, Friend of the Sea announced the sustainable certification of Calvisius Caviar of Agroificio Lombardi and its farmed white sturgeon (Acipenser

PEOPLE MOVES

Malcolm Smith
KONA Blue Water Farms, of Kailua-Kona, Hawaii, appointed David Vallesu vice-president of sales. Vallesu has 18 years experience in seafood sales, marketing and management. In his new role, Vallesu is responsible for managing the company's sales team and working with CEO Michael Wink in developing and implementing strategic sales plans for Kona Kampachi.

Thomas James
valuable asset in the furthering its marketing approach.

NEBRASKA, USA, based Integrated Aquaculture International (IAI) has appointed Malcolm Smith as director of breeding and hatchery operations. Smith will be located in Brunei Darussalam, overseeing selective breeding and hatchery production of specific pathogen-free Penaeus monodon and Penaeus stylirostris shrimp in IAI's joint project with the Department of Fisheries of Brunei Darussalam. He will be responsible for managing, monitoring, market expansion, production, and hatchery facilities to produce large, fast growing monodon.

Thomas Jamehas joined IAI as the director of pond production. James will manage the joint project's hatchery and production facilities.

Young's 상태 future on fish

LEADING UK retail brand Young's Seafood has set out its stall unequivocally terms regarding the importance of fish farming. To security of future supply was policy document entitled 'I believe fish farming is a good thing'

Covering all firms in the group – Young's parent company, Young's Seafood represents all fish purchases, the policy outlines the fact that fish farming would be more important in the years, given escalating demand, the increased costs, expanding populations and wild fisheries are limited.

We felt it was important to restate our commitment to aquaculture at a time when the food industry is facing some challenges and fish is under pressure,' says Foodvest's executive Mike Parke, 'It's a healthy and natural source of the only way for it to remain available to everyone is the increased use of responsibly aquaculture'.

Foodvest/Young's has also been part of the 'Fish for Life' sustainable approach, scooping 'Tick of the Year' in the UK's first in the Community Awards. Young's and Foodvest entry was shortlisted as one of four finalists to go forward into HIC's Examples of Excellence in 2008, winners of which are announced monthly.

During fish week a number of Young's staff were rewarded by Young's in its latest annual Seafood Championship – a competition, now in its 15th year, which aims to encourage students to get innovative. A panel of judges were awarded the Young's development of Mitch Tonks restaurants.

Fiji slams EU bid

FIJI'S Chamber of Commerce is criticising the European Union being unfair towards Fijian seafood. After its recent decision to end its Fijian seafood, Times, Chamber president Mohinder Mahraj was quoted saying.

'The EU wants us to comply with EU standards. We are appalled with the EU's approach to Fijian seafood. It is a trade issue, not an environmental one. The EU is looking to protect its own interests at the expense of our industry. We are concerned about the potential impact of this decision on our economy. The EU's stance is not consistent with its commitment to sustainable development.'
retail segment. Grupo Amasur’s Getafa factory in Madrid, which manufactures products sold by Kristagroup, was awarded International Food Safety (IFS) certification in June. This is the first seafood factory to be awarded IFS certification, Cecilia says. “We’re very happy because it is very difficult to get.”

**Gel Pêche boasts a new eco-label**

Gel Pêche of France, which has been exhibiting at Conxemar for the past six years, will again have wild-caught frozen Madagascan shrimp on display on its stand. However, this year the boxes should be displaying the Eco-Pêche label to show that the shrimp have been caught in an environmentally friendly fashion.

The tropical specialist was undergoing certification as we went to press. “The last audits are going to take place in weeks 28 and 29 on our various sites in Madagascar, and we shall have the validation at the end of July or beginning of August,” says Katia Bosseboeuf.

Gel Pêche is committed to responsible fishing, according to Bosseboeuf. “Our declared intent is to conserve this wild ocean wealth provided by nature, for ourselves and future populations. Today, we are affixing this label to our products to inform and guide consumers in making a responsible choice.”

The company is concentrating on three main themes:
- Commitments towards the environment and sustainable fishing;
- Fair trade commitments; and
- Quality commitments.

Gel Pêche already has Friend of the Sea approval for the commercial fishing of Madagascan shrimp. It says it targets stocks which are not overexploited, uses fishing methods which don’t impact the seabed and generates less than average (8%) discards. Gel Pêche claims that freezing onboard the catching vessel, ensures that the shrimp retain their optimal flavour and inimitable firm texture.

“Process preservation of the freshness and quality of the products because the shrimp are processed rapidly and the continuity of refrigeration is not broken. All the packaging takes place aboard ship.”

Says Bosseboeuf: “This process preserves all the freshness and original quality of the products because the shrimp are processed rapidly and the continuity of refrigeration is not broken. All the packaging takes place aboard ship.”

**Langoustine leader**

Exhibiting on the BIM stand (see panel on page 59), Glenmar Shellfish Ltd claims to be Ireland’s leading processor of Nephrops norvegicus, which it calls prawns but which are usually named langoustines on the European continent.

“Sourced from our own boats under stricter HACCP conditions and full traceability and with the Glenmar brand, customers are sure of a reliable and consistent high quality product,” says the firm’s Martina Hill.

In addition to its factory in Skibbereen, Co Cork, Ireland, Glenmar Shellfish also has a factory in Perce, Quebec, Canada. The company processes prawns/langoustines, scallops and shrimp.

Says Hill: “Twice a week we are delivering fresh fish from our boats directly to the markets in Spain, France and the UK. We have also recently established an office in Naples, Italy, successfully sourcing and producing frozen at sea.”

**New frozen trout packs**

The Tres Maris Group, which claims to be a world leader in the trout market, will launch new packs of frozen fish – white and red – in 1kg and 750g bags at Conxemar. They will join its existing 250g and 400g variants. “The firm’s Raquel Rodriguez, we’re developing our packaging to wider offer with more attractive product consumers; easy to cook, clean and boneless fillets.”

Since the group launched its own frozen trout brand ‘Tres Maris’ in 2005, which successfully entered foreign markets such as Russia, Poland, the UK and Germany – Europe’s top frozen fish consumer, according to Rodriguez – the company has progressively broadened its

Focusing on Europe’s needs

The New Brunswick Department of Fisheries will be highlighting products from the Atlantic province’s seafood producers on its stand at the Canadian pavilion.

Species featured will include lobster, salmon and coldwater shrimp.

“New Brunswick has long been known for its outstanding seafood products,” says Anita Landry, trade executive, and client customised products and services are New Brunswick producers’ specialty. Their compact but adaptable processing capabilities make it possible to focus on each European

produces a range of frozen raw lobster products – whole, split, meat and barbecue tails, as well as frozen whole cooked lobster will be on the stand. ‘We have the facility to process with the newest high pressure technology available,’ says Marie-France Thibeault.

‘The benefits are evident in the texture and juicy taste, the same as for live lobster. Other benefits are convenience, maximum yield and constant quality.”

During the last 25 years, New Brunswick has become one of the most significant

in New Brunswick, such as on-vessel and dryland holding facilities, plus the measuring of lobster TRP (Total Hemolymph Protein) levels with stringent health and safety regulations, ensure that our lobsters are of prime quality making them the first choice for buyers and their customers.

The natural tidal pounds of the Bay of Fundy and inland seawater holding tanks guarantee market supply year-round.

While the province is known for its live lobsters, companies there are branching out to include frozen and value-added products. We have a robust base of harvesters and processors who produce a diversified portfolio of products to meet different market needs.”

NEWS IN BRIEF

Push for lobster sustainability laws
IT IS time for regulators to adopt a minimum size requirement for
spiny lobsters harvested from the Caribbean, Gulf of Mexico
and the South Atlantic, according to the USA's National Fisheries
Institute (NFI) in a letter sent to the NOAA. A minimum size
would allow a higher percentage of lobsters to reach sexual
maturity before they are harvested, says NFI.

Norwegian fisheries enter MSC certification
THE Norwegian Seafood Export Council has entered Norway's
North East Arctic cod and haddock fisheries into full assessment for Marine
Stewardship Council (MSC) certification. If successful, 174,000 metric tons of
Norwegian cod and 76,500 metric tons of Norwegian haddock will be allowed to
bear the MSC eco-lable. The fisheries take place inside the Norwegian Exclusive Economic Zone.

Holland Shellfish renamed Lenger
HOLLAND Shellfish has changed its name to Lenger Seafoods. Acquisitions, new activities and expansion of the firm's product range means the original company has changed significantly, with steady growth in activities in Europe and new branches in Vietnam, Mauritania, Morocco and Costa Rica. The Lenger family has been a part of the fishing industry for over 80 years.

Leroy farmed cod is Friend of the Sea
ECO-LABEL Friend of the Sea's presence in Scandinavia continues to grow, with the news of the completion of the certification of a Norwegian and world leader in cod farming - Nærøyfjorden AS - which sells sea farmed fish through Hallvard
Lenny. In 2008 Nærøyfjorden AS will produce 2500 tonnes of edible fish, making it one of Norway's leading companies.

UK chippies comp reveals shortlist
THE top fish and chip shops in each area of the UK have been announced in the National Fish & Chip Shop of the Year competition 2009. The highest scoring shops will be whittled down to 19 area winners in October, and the top 10 shops in Britain will progress to the grand final in March 2009.

Managing the green-eyed monster

Out of the blue, green is the new black in the land of green and gold. It’s a while since we last discussed the issue of sustainable seafood and the Australian scene in this column, and in that time a veritable tsunami of interest has washed over all areas of the industry, from catchers to cooks and most importantly - consumers.

The Australian seafood industry has a long and robust history of operating to world's best environmentally standards, however it has only been over the past 24 months that environmental awareness at consumer level has transformed from awareness to activism. Seafood sustainability has become the dish du jour for both opinion formers and opinion leaders among the food community, frankly, being seafood green in Australia is cool.

Yet it is this sudden awakening to environmental issues relating to seafood supply by Australian consumers (and, importantly, by the media) that has caught many in the industry unawares and unprepared, where stakeholders in Europe and the US have been evolving strategies and developing practices to accommodate consumer concerns for well over a decade, it is such a contemporary issue in Australia that an air of confusion still prevails.

In the 25 years I have been working the seafood industry in this country, this issue has raised to much public debate. It seems everyone has an opinion and there are so many claims and counter claims in regards to sustainability being bandied around, it’s hard to know what’s the truth and what is simply greenwash.

The consistent thread within all of the discussion, however, is that the sustainability of wild-caught fisheries Australia is paramount - the consensus across the community is that this is a non-negotiable imperative for every stakeholder. However, this primary principle seems to have become lost amongst fashionable greenwashing hype at menu level, where the foodservice industry, as much as the seafood industry, is setting the agenda for consumers in the sustainable seafood concept.

All of a sudden, fashionable restaurant parlance - terms like dayboat, line-caught, live-time handled - have been replaced by ‘sustainably caught’ on menus in the finest dining rooms around the country. As the food media in particular picks up on this broad-brush marketing, the message is being broadcast loud and clear to consumers, even though there is often no relevance or reality to many of the claims.

Uniquely green

Australia is one of the most highly governed commercial fisheries on the planet. Our Commonwealth Environment Biodiversity Protection Act is one of the most robust pieces of marine legislation in the world - effectively, this law guarantees the sustainability of both wild and farmed fisheries. In addition, Australia is actually a fairly minimal producer of seafood by global standards, and should thus be a relatively simply model to manage. However, with no single touch-point for communication between catcher and consumer, the task of presenting a balanced, independent and authoritative view is a tricky challenge for the average Australian fisherman.

Further compounding this situation, the three largest retailers of seafood in Australia share one consistent theme in regards to livestock and the sustainability debate - none has a clearly defined strategy or protocol in place. And while Australia can proudly boast home to the first certified Marine Stewardship Council (MSC) fishery in Western Rock Lobster, the organisation and its quirky blue fish logo are still widely unknown outside of select fisheries circles.

A significant issue faced by the MSC in Australia lies in the fact that the biggest volume-selling species in retail, farmed salmon, is not covered by the organisation’s jurisdiction. However a rising swell of support at government, agency and retail level in Australia augurs well for the immediate future for the MSC, along with the rampant consumption in Australia of English food media, which is giving the label a significant imprimatur across the professional and consumer food communities.

Friend of the Sea (FOTS), the other eco-label outfit that has become so popular in Europe, fast gaining ground on these shores. The South Australian Clean Seas Aquaculture has both its Hihiakau kingfish and South Australian certified by FOTS, while not currently a marquee which has recognition within the trade or consumer markets in Australia, it is interesting to see how Australia takes to the FOTS proposition.

FOTS has already captured the imagination of the local catching and growing industry through its certification of existing fisheries data from government and industry agencies. The appeal to catchers and growers is that this makes the audit and certification process simpler and less costly than the MSC’s. However FOTS will need to make some fast running to assume the preferred position MSC appears to be gaining with the major retailers down under.

Several other third party sustainable seafood programmes have been developed in-house within Australian fisheries, such as the Clean Green programme created by the Southern Rock Lobster Fisherman’s Association, while some have plumped for the internationally recognised and universally misunderstood (yet still ISO14001) standard.

Therefore while the current backlash of certified/seafood available in Australia is limited, if the growing consumer trend is any indication then there is a real and urgent need in this country for a clear and simple message. If you are a producer or exporter to Australia, consider that while the Australian consumer has been a late adopter of the sustainable trend, their level of expectation ranks among the highest outside of Europe.
